Abstract:

A color applied to colorful types of objects and walls in semi-solid or liquid form is called makeup. In present time we've nearly all color paints available in the request. Paint not only gives color to different types of effects but also protects them from deterioration for a long time. Indeed, the film we see every time is made more beautiful by adding different colors. Painters currently make the film and more beautiful when they're colored. Paint is generally stored in several kinds, similar as gouache or synthetic. We can get different types of colors from the nature around us. We can get colors from the shops around us and from the soil as shown below. These natural painted maquillages can control the temperature of the effects we use so that they don't spoil for a long time. "Experience is the comb which nature gives us when we're bold". The design of natural prints has been a nice experience and has proved effective for us. In collecting leaves, flowers, and different types of soil and by rooting their colors lead to. Make points and make beautiful oils. The main ideal of this design is to know virtually the color of shops in their design. If it was a good experience during my training through this design, I was apprehensive of the colorful colors of shops which give different systems. This is a huge eventuality for the point assiduity. As modern income, people prefer innovative new colors in their homes

Key Words: Maquillages- Pigment extraction -shifting- grinding – boulders breaking

Introduction:

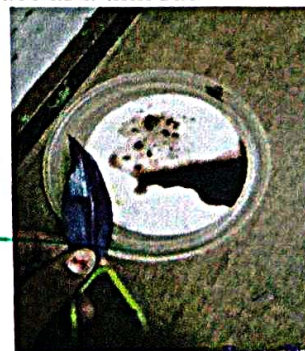

A color applied to colorful types of objects and walls in semi-solid or liquid form is called makeup. In present time we've nearly all color paints available in the request. Paint not only gives color to different types of effects but also protects them from deterioration for a long time. Indeed, the film we see every time is made more beautiful by adding different colors. Painters currently make the film and more beautiful when they're colored. Paint is generally stored in several kinds, similar as gouache or synthetic. We can get different types of colors from the nature around us. We can get colors from the shops around us and from the soil as shown below. These natural painted maquillages can control the temperature of the effects we use so that they don't spoil for a long time.

Maquillages, Its Constituents & Function:

"Paint is a mixture of a unique homogeneous mixture of three major ingredients viz. Binder, Pigment, VOC & complements, which when applied on the face as a thin substance that forms a solid dry discoloration after oxidation/ evaporation/ polymerization".

Properties Of Paint:

- * It should have high caching power & the required color.
- * It should be suitable to repel the atmospheric conditions in which it'll be put.
- * The unwanted particles should be washable.
